

PacEHR™

Electronic Health Record

Transform your practice with an EHR made for and by LTPAC professionals.

TheSNFist™ Suite

TheSNFist™ Suite of Products and Services covers all your LTPAC needs under one roof:

- SNFConnect™ communication platform
- PacEHR™ electronic health record
- BillEHR™ mobile charge capture
- NavigatEHR
- Revenue Cycle Management
- Payor Enrollment and Credentialing

Are you spending more time in documentation than seeing your patients?

Do you have full visibility of your patient's data throughout the care continuum?

Does your patient's data help you make better care decisions and improve coding accuracy?

PacEHR will help you:

- Reduce time spent on documentation by 10x and quickly integrate with major software systems for facilities
- Improve coding accuracy to maximize reimbursement and reinforce income flow
- Collect data throughout the care continuum, unlock meaningful insights and easily exchange information with other providers and facilities
- Document your visit more efficiently with templates designed specifically for the most common types of patient visits in LTPAC, assisted by smart text replacement for extra time savings and ease while documenting a patient encounter.
- Leverage the power of data to make timely and confident decisions regarding patient care and practice management
- The importing capabilities of PacEHR™ electronic health record saves time on data input by allowing you to parse previous encounter data into a new encounter for convenience and consistency in data maintenance

Inefficiency is the arch-enemy of long-term post-acute care (LTPAC) professionals.

In the LTPAC industry, both providers and patients are moving targets. The unique nature of LTPAC delivery requires providers to quickly travel between multiple locations to provide care and fully integrate with major facility systems.

Patients, on the other hand, come with various needs that may change every day. **Care providers need an agile electronic health record (EHR) system** that brings full visibility of patients' information, streamlines dataflow and eliminates strenuous manual data input.

With Saisystems Health's PacEHR™ electronic health record, LTPAC care providers can say goodbye to the data input burden and spend more time seeing patients instead of completing data entry tasks.

PacEHR™ electronic health record is built upon Saisystems Health's 30 years of healthcare experience and our commitment to empowering providers with data and technology.

Workflows designed specifically for clinicians in LTPAC setting.

PacEHR™ electronic health record introduces multiple capabilities designed to reduce documentation time, such as sorting patient census by facility, easy navigation between patients without going back to the main window, and integrated billing for the patient encounter.

Strong Integration and Multi-function

More than just an EHR, PacEHR™ electronic health record can help you streamline your operation and get faster reimbursement with its integration capabilities

- Integrate with any billing system of your choice for seamless importation of patient's data, intelligent guide of coding best practices and quicker reimbursement from payors
- Easy enrollment of patients in CCM. PacEHR™ electronic health record captures information on programs that are in the interest of patient care and reimbursable outside of a traditional face-to-face visit.

Patient	CCM	DOB	Location	Last signed encounter
Bulter, Ethan (M, 40)	Event ID	12/25/1974	demoFacility	02/05/2021
